

Cleaning - Venetian Blinds

Luxaflex® Blinds are easy to clean by first of all closing the slats and then removing the dust with a feather-duster, short-haired brush or a soft cloth. If the slats are very dirty, the best way to remove this is with a damp cloth. You can also use a vacuum cleaner set at the lowest level. You can also gently spray-clean larger surfaces and then let them dry properly.

NB: If the steel head rail of the blind is not properly dried, there is a risk of it rusting.

You can of course also have the blinds thoroughly cleaned by a professional cleaning company that uses an ultrasonic treatment system. While the advice above is given with care, we cannot accept any responsibility for the results of cleaning.
